

What To Look For In A Child's Speech Therapy App

Text-to-speech features that facilitate easy learning of words and their pronunciation.

Visual representations to explain the creation of sounds in the mouth.

Recommendations by language or speech therapists. It would be much better if they designed the app.

In-built chat or call option to reach out to professionals for assistance with any activity in the app.

Animation videos that help the children overcome their difficulties by showing what needs to be done and how.

Practice features to keep track of your child's progress and make it more goal-oriented learning.
